

COMSATS University Islamabad, Vehari Campus

Department of Computer Science

Final Year Project Specification

Serial Number (to be allotted by FYP Committee)

--

Project Title

Write a clear, specific, and meaningful title (maximum 15–18 words)

Field / Domain

Mention the major area of Computer Science or Software Engineering to which your project belongs. Choose only one primary domain.

Examples:

- Artificial Intelligence / Machine Learning
- Cybersecurity
- Data Science
- Web Development
- Mobile Application Development
- Internet of Things (IoT)
- Cloud Computing
- Computer Vision
- Natural Language Processing
- Software Engineering (Process / Testing / DevOps)

This helps evaluators understand your technical focus immediately.

Project Idea

Describe your project clearly and logically in one continuous paragraph. Your idea must include:

- The problem statement (What problem exists?)
- The target users or industry domain
- Your proposed solution
- The technical approach
- The expected outcome

Suggested Structure:

- 2–3 lines → Background of the problem

- 2–3 lines → Proposed solution
- 2–3 lines → Technical approach
- 1–2 lines → Expected benefits or impact

Word Limit: 300–400 words (Paragraph format only). Do not write features here. Focus on concept, scope, and technical direction.

Functional Requirements

List 5–8 major functional features that your system/application will provide. These should describe what the system will do, not how it will be implemented.

- User registration and authentication
- Admin dashboard for system monitoring
- Real-time data processing
- Report generation module
- Notification system
- Data storage and retrieval
- Model training and prediction module (if AI-based)
- API integration (if applicable)

Word Limit: Approximately 300 words (Bullet format). Each feature should be written as a clear system capability.

Technology, Dataset & Tools to be Used

Clearly mention the technologies you plan to use. Be realistic and choose tools suitable for undergraduate-level implementation.

Divide into categories:

- Programming Language
 - Python / Java / C++ / JavaScript / etc.
- Frameworks / Libraries
 - TensorFlow / PyTorch / React / Node.js / Django / etc.
- Database
 - MySQL / MongoDB / PostgreSQL / Firebase
- Development Environment
 - VS Code / Android Studio / Visual Studio
- Dataset (if applicable)
 - Mention dataset source (Kaggle / UCI / Self-collected / API-based data)
 - Briefly describe dataset type (image / text / tabular / time-series)

Only mention tools you actually plan to use.

Note:

The complete Project Specification Document must not exceed 1000 words.

(This page must always be printed separately and attached at the end of the initial pages of the Project Specification Document.)
